EPW200

Trading Card Printer

Brilliant Holographic Cards

With the EPW200 Trading Card Printer, you can control how a rainbow or dot hologram appears in your card designs based on “empty” areas in your layout, allowing you to create lighting effects to make your card designs “*pop*”*!*

The beautiful finish produced from high-definition 600dpi printing combined with the universal appeal of holograms lets you create “nostalgic goods” that instantly generate excitement and value for your event, brand, theme, artist, fan club and more.

Compact & Convenient

The EPW200 printer’s compact design is suitable for any desktop, whether in your studio, in a photo booth, on an event table or even attached to a kiosk. As a complete system, it provides a one-stop solution from design to card printing. No ventilation or drying equipment is required, freeing you from troublesome maintenance tasks.

Everything You Need for Amazing Cards

Two Types of Hologram Stock

You can choose from two types of hologram paper cards, Rainbow or Dots, allowing you to create a finish that best suits your brand image and intended use. Using the opaque white on the ribbon, you can creatively control where the holographic effect shines through, adding sparkling highlights exactly where you want them in your card design.

Enjoy the thrill of not knowing which card type will come out with each printing, adding new surprises to your promotions and events!

Entertainment Printer WoW!
